Art Unit: 3762

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-8, 18-21, drawn to a composite monitor and defibrillator assembly, classified in class , subclass .
  - II. Claims 9-17, 24 drawn to a defibrillator module, classified in class 607, subclass 5.
  - III. Claims 23-26, drawn to a method of treating a patient, classified in class 128, subclass 898.
2. The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because they do not require a defibrillator sensor. The subcombination has separate utility such as an independent operating defibrillator.
3. Inventions I , II and III are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP

Art Unit: 3762

§ 806.05(h)). In the instant case the method can be practiced without a external monitor sensor or a defibrillator sensor.

4. Newly submitted claims 23-26 are directed to an invention that is independent or distinct from the invention originally claimed for the following reasons: The claims maybe performed without the monitor or defibrillator sensors recited in the apparatus claims.

5. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

6. Since applicant has received an action on the merits for the originally presented invention, this invention has been constructively elected by original presentation for prosecution on the merits. Accordingly, claims 23-26 withdrawn from consideration as being directed to a non-elected invention. See 37 CFR 1.142(b) and MPEP § 821.03.

7. The examiner thus requires an election between inventions I and II. Claim 9 was amended to include a monitor at the end of the claim in applicant's response dated 4-28-03 however the preamble only recites a debrilliator module rather than a composite (monitor/defibrilliator) recited in the preamble of claims 1 and 18. If applicant were to amend claim 9 in such a fashion to make it

Art Unit: 3762

clear that both a monitor and defibrillator are part of the claimed invention, the examiner will rejoin groups I and II for further examination.

8. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

9. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(I).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Mark Bockelman whose telephone number is (703) 308-2112. The examiner can normally be reached on Monday through Friday from 9:30 am to 6:00 pm.
